

# COMPARING NEURAL NETWORKS FOR NHL PERFORMANCE FORECASTING

GROUP ID: 44

TREVOR LEE - 100751771

# THE PROBLEM

- Objective: predict next-season NHL player performance based on their prior 3 seasons
  - Stats in sports can be volatile, especially hockey
  - Want to see if we can make a viable solution
- Method: use MLP, RNN, LSTM, and a LSTM-MLP hybrid

Michael Mauboussin's skill-luck continuum  
<https://www.vox.com/videos/2017/6/5/15740632/luck-skill-sports>

# DATASET

SOURCE: [KAGGLE – NHL PLAYER STATISTICS BY BENZIK](#)

- Spans roughly 1979-80 to 2019-20
- Contains rows of box score stats, player details, and more per player-season
- Processed:
  - Removed goalies
  - Trimmed columns
  - Merge season stats when player was on multiple teams
  - Flattened 3-year stat lines

# TRAINING FEATURES

- Inputs ( $x$ ):

- Per game rates of goals, assists, shots on goal (SOG), as well as the shooting percentage for the current season and previous 2 seasons
- Player info (position, age, experience, height, weight, BMI)

- Targets ( $y$ ):

- Per game rates of goals, assists, shots on goal (SOG) for the next season

```
inputs = [  
    'G_per_gp_prev2',  
    'A_per_gp_prev2',  
    'SOG_per_gp_prev2',  
    'Games_played_prev2',  
    'Shooting_Percentage_prev2',  
    'G_per_gp_prev',  
    'A_per_gp_prev',  
    'SOG_per_gp_prev',  
    'Games_played_prev',  
    'Shooting_Percentage_prev',  
    'G_per_gp',  
    'A_per_gp',  
    'SOG_per_gp',  
    'Shooting_Percentage',  
    'Games_Played',  
    'Position',  
    'Age',  
    'Experience',  
    'Height',  
    'Weight',  
    'Body_mass_index',  
]  
targets = [  
    'G_per_gp_next',  
    'A_per_gp_next',  
    'SOG_per_gp_next',  
    'Games_Played_next',  
]
```

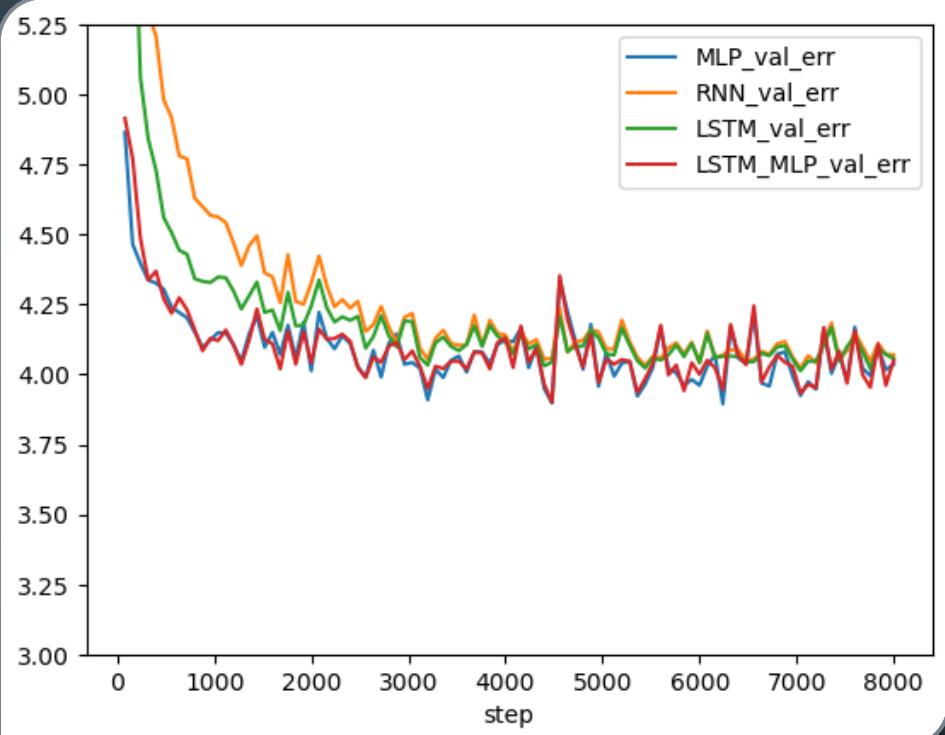

# TRAINING

- Nearly identical functions to assignment 3
  - Modified to record error instead of accuracy
  - Learning rate of  $1e-3$
  - 100 epochs

# MODELS

- MLP
  - Connected layers on a flattened input
- RNN
  - 3 season sequence
- LSTM
  - Same as RNN but with LSTM instead
- LSTM + MLP
  - LSTM but passed through an MLP head instead of a single Linear Layer

# COMPARISON

- MLP models converge faster
- MLP models spike more

# APPLICATION – DUNCAN KEITH

- Aging case – age 35
- Inaccurate goal rates – small denominator
- LSTM + MLP preformed best

	Actual	MLP	RNN	LSTM	LSTM_MLP	MLP_err%	RNN_err%	LSTM_err%	LSTM_MLP_err%
G_per_gp_next	0.073	0.054	0.137	0.127	0.068	26.756	86.654	73.934	6.703
A_per_gp_next	0.415	0.326	0.373	0.485	0.363	21.259	10.110	16.977	12.516
SOG_per_gp_next	1.720	2.007	1.794	2.038	2.025	16.711	4.325	18.498	17.792

# APPLICATION – EVGENI MALKIN

- Injury history case – consistently fewer than 70 GP
- Poor goal rate prediction
- Good GP predictions
- No clear winner

	Actual	MLP	RNN	LSTM	LSTM_MLP	MLP_err%	RNN_err%	LSTM_err%	LSTM_MLP_err%
G_per_gp_next	0.532	0.321	0.373	0.340	0.293	39.705	29.929	36.140	44.919

# APPLICATION – JACK HUGHES

- Emerging star
- Injury history
- More accurate – larger denominators
- MLP models performed best

	Actual	MLP	RNN	LSTM	LSTM_MLP	MLP_err%	RNN_err%	LSTM_err%	LSTM_MLP_err%
G_per_gp_next	0.435	0.405	0.469	0.476	0.456	7.008	7.684	9.372	4.734
A_per_gp_next	0.758	0.752	0.659	0.725	0.743	0.827	13.079	4.324	2.023
SOG_per_gp_next	4.419	3.892	3.767	3.789	3.990	11.934	14.755	14.272	9.725
Games_Played_next	62.000	67.784	71.375	73.062	70.383	9.330	15.122	17.842	13.521
G	27.000	27.000	33.000	35.000	32.000	0.000	22.222	29.630	18.519
A	47.000	51.000	47.000	53.000	52.000	8.511	0.000	12.766	10.638
SOG	274.000	264.000	269.000	277.000	281.000	3.650	1.825	1.095	2.555

# APPLICATION – JARED MCCANN

- Outlier shooting percentage
- Goals look off – look back at shooting percentage
- GP not good
- MLP clear best

avg_err_%	13.009	19.177	17.411	13.146

# DISCUSSION

- RNN and LSTM didn't have enough data to shine
  - Only 3 seasons
  - Conditioned data
  - Small dataset
- Improvements
  - Context
  - Flags
  - Details
  - More data
